Company Backgrounder

When QA Systems was founded by Andreas Sczepansky in 1996, it operated as the exclusive distributor of Programming Research's static source code analysis tools (QA-C, QA-C++ and QA Fortran) in Germany, Austria and Switzerland.

Customers began to see QA Systems as a source of knowledge and expertise for static quality analysis, and it wasn't long before they were turning to QA Systems for the provision of a complete software testing solution. In response, QA Systems expanded its offering to include unrivalled training, consultancy and audits. In the years to follow, QA Systems moved into dynamic testing, and in 2012 completed the acquisition of the Cantata and AdaTEST testing business from IPL Information Processing Ltd including the transfer of the complete engineering team to QA Systems Ltd.

QA Systems now operates across Europe and through a global reseller network. QA Systems has over 350 blue-chip customers, who span the full range of safety related and business critical industries. In addition to our static and dynamic testing tools, the QA Systems Academy shares our know-how and expertise with engineers from around the world.

Software Quality is QA Systems' driving force. Its tools and services enable organizations worldwide to develop tested high-quality software, which meets the stringent demands of industry safety standards and high customer expectations. Our drive for software quality is what makes us...
